

DW – handle for implant driver

instruction manual

Intended use

The device is used for supporting implant drivers that are used with a wrench.

Main features

- More precise implant insertion procedure.
- Less chance for the insertion tool to slip from an implant.
- No need to hold the wrench with a finger. Nothing obstructs the view, especially in distal areas.
- No chance to grab the glove while using the implant driver.

How to use

Put the instrument inside a hole in the ratchet instrument head and hold it with your finger where it is comfortable, then with the other hand, turn the wrench clockwise.

Can be used with these ratchet instruments
